

Web & Wine

February 2017

Everything is
Prettier now

Hi again!

Florian Pichler

Visionary Director / Interim Frontend Director

anfema GmbH

@pichfl / fp@ylk.gd

Yes, we are hiring.

Yes, we want you.

Especially if you know Frontend Development or Python / Django.

We hire working students and full time.

**This is my last talk
about code style
tools.**

**Wait? Yet another
Linter?**

**An Opinionated
Code Formatter.**

prettier.io

- Available since early 2017
- Code formatter
 - JavaScript (ES2017, JSX, Flow, TypeScript)
 - CSS (and LESS / SCSS)
- Works well with ESLint and StyleLint
- Plugins for most editors and IDEs

**So why is this
a good thing?**

- No more debate about stylistic issues
- Cleaner code reviews
- Write code, let Prettier format for you
- Easy to adopt: Run on any codebase and stop worrying
- Help newcomers
- Minimal to Zero configuration

How does it work?

- Just like ESLint, Babel and many other JS tools
- Using recast
- Reproducible results

1. Convert source text into an abstract syntax tree (AST)
2. Print this AST as source text

Demo time

Florian Pichler
